NATIONAL AGRICULTURAL LIBRARY

SEP 29 1966

CURRENT SERIAL RECORDS

AYRSHIRE, GUERNSEY, HOLSTEIN, JERSEY, BROWN SWISS,  
MILKING SHORTHORN, RED DANE, RED POLL, AND  
MIXED BREED SIRES

Agricultural Research Service  
U. S. Department of Agriculture

The sire evaluations, as summarized in this list, are appraisals based on production performance information available through DHIA.

The contemporary herdmate comparisons used in the USDA-DHIA Sire Summaries are especially effective in reducing environmental influences arising from herd, year, and season of calving. The primary purpose of the summaries is to use daughter-herdmate differences as well as predicted averages in evaluating bulls on the basis of estimated breeding value or transmitting ability for milk and butterfat yield. While these evaluations represent the most reliable methods available, their usefulness in ranking bulls may be seriously limited, (1) when only 1 or few herds are represented in the summary, (2) when less than 15 to 25 daughters are represented in the summary, or (3) when daughter averages only are used. Under such conditions, it is especially important to supplement the sire summary with additional information from the herd(s) in which the daughters made their records. Under any circumstance, caution should be used in predicting results based on a single mating.

The sire summaries listed, and especially those representing initial or preliminary evaluations, should be supplemented with related and other information from the herd(s) in which the daughters are located. A personal evaluation of herd feeding and management conditions is highly desirable.

When a non-AI sire evaluation is based on 5 to 9 daughter-herdmate comparisons and an AI evaluation is based on 5 to 24 comparisons, these should be considered "preliminary."

## DHIA SIRE SUMMARY LIST AUGUST 1964

Ayrshire, Guernsey, Holstein, Jersey, Brown Swiss, Milking Shorthorn, Red Dane, Red Poll, and Mixed Breed Sires

This DHIA Sire Summary List contains information for 212 Ayrshire, 1,090 Guernsey, 3,189 Holstein, 798 Jersey, 250 Brown Swiss, 79 Milking Shorthorn, 3 Red Dane, 1 Red Poll, and 2 Mixed Breed sires. These summaries were compiled from data received by the Animal Husbandry Research Division, ARS, up to August 1, 1964. A sire summary record is compiled for a sire when 5 or more of his daughters have lactation records reported. This report contains summaries for the following categories: (1) new summaries (5 or more progeny available for the first time), (2) all AI sires reported as in service during 1963, (3) sires with 50 percent or more additional daughters reported since last being summarized, and (4) sires for which special requests for summaries were received.

All production records used in sire summaries consist of lactation records of 305 days or less and standardized to a mature equivalent, twice-a-day milking basis. When more than one lactation is available for a cow, all records for both the daughter and her herdmates are averaged and used to represent her performance. All incomplete records, which are reported as terminated by (1) abortion, (2) culling for low production, or (3) sold for dairy purposes, are extended to a 305-day basis and used in compiling the sire summaries regardless of their length. Records which are deleted and not used for summaries include those coded as complete, but less than 180 days in length, and those estimated or initiated by abortion. However, incomplete records may not be included for cows which calved prior to 1959.

## EXPLANATION OF LISTED SIRE SUMMARIES

Summary data for the Guernsey sire 497411, Fairlawn Actor's Acme, listed on page 24, are as follows:

|                |                            |         |    |                  |     |        |     |     |       |       |     |  |  |  |  |  |  |  |  |
|----------------|----------------------------|---------|----|------------------|-----|--------|-----|-----|-------|-------|-----|--|--|--|--|--|--|--|--|
| 497411         | FAIRLAWN ACTOR-S ACME..... |         |    |                  |     |        |     |     |       |       |     |  |  |  |  |  |  |  |  |
| 05-29-52       | 322785                     | 1097431 | 52 | NON-AI DAUGHTERS | 127 | 10,002 | 4.6 | 456 |       |       |     |  |  |  |  |  |  |  |  |
| AI STUD, 23-02 | LISTED, 05-64              |         | 51 | WITH HERD-MATES  | 125 | 10,076 | 4.6 | 459 |       |       |     |  |  |  |  |  |  |  |  |
| STATES-        | 22,23,43,51,54,55,64       |         |    |                  |     |        |     |     | 15    | 9,332 | 435 |  |  |  |  |  |  |  |  |
|                |                            |         |    |                  |     |        |     |     | DIFF. | 744   | 24  |  |  |  |  |  |  |  |  |

To explain the sire summary above, Line 1 lists the registration number and name of the sire; Line 2 lists the birth date of the sire, the registration number of his sire, and the registration number of his dam. (When a bull is summarized for the first time his name, birth date, and registration numbers of his sire and dam are not available and, therefore, are not listed--to illustrate see Sire No. 500050 on page 25.) Pedigree information for each summarized sire is obtained from Herdbooks or the Breed Registry organization after the sire is summarized for the first time. This pedigree information is then included in the sire summary when the sire is retabulated.

"AI Stud, 23-02" (Line 3) indicates that this sire is in AI service even though only natural-service progeny were available for summary. "Listed 05-64" indicates that the bull was last summarized in May 1964. "States--22,23,43,51,54,55,64" (Line 4) indicates that daughters were available from the seven states coded 22,23,43,51,54,55, and 64. A list of State codes is given on page 4.

The sire's summary includes the records of 52 non-AI daughters with a total of 127 lactation records. Herdmate data were available for 51 of these daughters. The total 52 daughters had 127 records which averaged 10,002 pounds of milk, 4.6 percent butterfat, and 456 pounds of butterfat. Herdmate data were available for 125 records of 51 daughters, averaging 10,076 pounds of milk, 4.6 percent butterfat, and 459 pounds of butterfat. The 51 daughters had an average of 15 herdmates per daughter. The average production of these herdmates was 9,332 pounds of milk and 435 pounds of butterfat. On the average the sire's daughters produced 744 pounds more milk and 24 pounds more butterfat than did their herdmates. (Negative differences from herdmates are indicated by preceding minus signs.)

The sire summary for the Jersey sire 525627, Murray Royal Design Jeweler, listed on page 242, is as follows:

|                |                                  |         |     |                  |     |       |     |     |       |       |     |       |     |  |  |  |  |  |  |
|----------------|----------------------------------|---------|-----|------------------|-----|-------|-----|-----|-------|-------|-----|-------|-----|--|--|--|--|--|--|
| 525627         | MURRAY ROYAL DESIGN JEWELER..... |         |     |                  |     |       |     |     |       |       |     |       |     |  |  |  |  |  |  |
| 02-12-50       | 409653                           | 1565130 | 164 | AI DAUGHTERS-25* | 355 | 9,069 | 4.9 | 446 |       |       |     |       |     |  |  |  |  |  |  |
| AI STUD, 61-01 | LISTED, 05-64                    |         | 156 | WITH HERD-MATES  | 342 | 9,117 | 4.9 | 450 |       |       |     |       |     |  |  |  |  |  |  |
| STATES-        | 57,58,61,63,65,92                |         |     |                  |     |       |     |     | 18    | 8,273 | 420 | 8,862 | 444 |  |  |  |  |  |  |
|                |                                  |         | 34  | NON-AI DAUGHTERS | 113 | 9,218 | 4.8 | 441 |       |       |     |       |     |  |  |  |  |  |  |
|                |                                  |         | 30  | WITH HERD-MATES  | 105 | 9,149 | 4.8 | 435 |       |       |     |       |     |  |  |  |  |  |  |
|                |                                  |         |     |                  |     |       |     |     | DIFF. | 800   | 14  |       |     |  |  |  |  |  |  |

The above summary includes data for both AI and non-AI progeny. The AI stud in which the sire was located is indicated as "AI Stud 61-01" where the "61" indicates the State and the "01" indicates the stud within the State. On pages 3 and 4 are listed the AI studs by State and their respective code numbers.

This sire had 164 AI daughters reported with 355 records, and 156 of these daughters had herdmate data available. The "25\*" indicates that the 164 daughters were in more than 25 herds. If they had made records in 25 or less herds, the actual number of herds represented would have been printed. For example, the bull 531074, also on page 242, had 24 AI daughters in a total of 6 herds. The explanation of the other production and herdmate data is the same as for bull 497411.

In addition to the information presented for natural-service progeny, an additional measure of a sire's breeding worth is computed from the AI progeny data. This measure, listed under the heading "Predicted Average", can be used to compare AI sires which may have varying numbers of daughters occurring in different levels of herds, with respect to producing ability of the cows and to herd management conditions. This value is explained on the following page. Sire no. 525627 has a "Predicted Average" rating of 8,862 pounds of milk and 444 pounds of butterfat.

## USING THE SIRE SUMMARY DATA

The sire summary information pertains only to milk and butterfat production. When a non-AI sire evaluation is based on 5 to 9 daughter-herdmate comparisons and an AI evaluation is based on 5 to 24 comparisons, these should be considered "preliminary."

Preliminary evaluations should be considered only as an indication and not conclusive evidence of the breeding value of a sire. Aside from the number of records involved, the reliability of the preliminary evaluations may be lessened due to inclusion of abnormally high proportions of records of heifers culled for low production during first lactation. Such records are received earlier than complete records initiated at corresponding dates. In general, if the data are unselected, the greater the number of comparisons of daughters versus herdmates included in an evaluation, the more reliable the evidence of the sire's breeding value. However, if a non-AI summary contains 25 unselected comparisons and an AI evaluation contains 50-60 unselected comparisons, additional data do not greatly increase the accuracy of ranking the sires according to breeding value.

In the use of the daughter-herdmate procedure, the desirable sire is one which markedly increases the production of his daughters over that of their herdmates. This is because the sire's daughters and their herdmates had an equal opportunity to produce. The difference of the production of a sire's daughters and their herdmates is roughly the same from one level of herd production to another. Generally, a sire with a markedly negative daughter-herdmate comparison should not be expected to raise the production level of a herd.

These production data for the daughters and their herdmates should be supplemented by additional information gathered from the herd(s) in which the daughters made their records. A personal evaluation of the herd management and feeding conditions in a herd where a daughter or group of daughters made their records is highly desirable when evaluating a natural-service sire.

## CALCULATION OF USDA-DHIA SIRE SUMMARY DATA

The herdmate (or contemporary) comparison is useful because it removes from the evaluation of breeding value complications arising from herd, year, and season of freshening variations in production.

Herd-year-seasons are based upon a five-month moving average. The appropriate average for the daughter of the sire is obtained by averaging all records of daughters of other sires calving in the herd in the same month as the daughters, in the previous two months, and in the succeeding two months. For example, the herdmate average for a sire's daughter calving in March would be obtained by averaging the production of all cows, except her paternal sisters, calving in that herd from January through May. All comparisons included in these summaries are on a within-breed basis.

Because the usefulness of the herdmate average is dependent in part upon the number of herdmates available, the herdmates' production is adjusted to place the herdmate data of daughters on a more comparable basis. For each individual lactation of a sire's daughter, the herdmates' average is corrected as follows:

$$\text{Adj. Herdmate Av.} = \text{Breed Season Av.} + \frac{\text{No. Herdmates}}{\text{No. Herdmates} + 1} (\text{Herdmate Av.} - \text{Breed Season Av.})$$

The breed season averages are calculated from the nationwide 305-day-2X-ME DHIA lactation averages for cows of the breed in question calving in the years 1958-62. This is done for both milk and fat. If a daughter has several records, the Adjusted Herdmate Averages for all lactations are averaged.

Both natural-service sires and AI sires are summarized on the basis of the daughters' average minus the average of the Adjusted Herdmates' Averages. Under AI conditions, where a sire's daughters are scattered over many herds, additional adjustments can be made to the daughter-herdmate data to slightly increase the accuracy of comparing different sires used in AI. These procedures described here, as well as those for adjusting herdmate averages, follow those developed by C. R. Henderson and co-workers at Cornell University. The daughter-herdmate difference tends to decrease slightly algebraically as the production level of herds in which the bull is used increases. This is because those herds tend to have cows of somewhat higher producing ability. The following step adjusts for this phenomenon:

$$\text{Adj. Daughter Av.} = \text{Daughter Av.} - 0.9 (\text{Adj. Herdmate Av.} - \text{Breed Av.})$$

This step serves to increase (over the daughter-herdmate difference) the summary of a sire used in high-producing herds and to decrease the summary of an AI sire used in low-producing herds. The breed average production used is compiled from all DHIA cows of the breed calving from 1958-62 and is listed at the bottom of this page for each breed.

In order to compare bulls which have widely varying numbers of offspring, it is necessary to adjust the above value for each sire in accordance with the number of progeny available. The predicted average (predicted "breeding value") is calculated for the AI data of a sire as follows:

$$\text{Predicted Av.} = \text{Breed Av.} + \frac{\text{No. of daus.}}{\text{No. of daus.} + 12} (\text{Adj. Daughter Av.} - \text{Breed Av.})$$

This gives the final estimate of the breeding merit of an AI bull. With daughters scattered in many different herds, the reliability of this rating can approach maximum accuracy with a very large number of progeny. In contrast, where each bull's daughters are largely in a single herd, the accuracy of comparing sires is neither great nor materially enhanced by including more than 30 unselected progeny. The "Predicted Average" rating is an estimate of the average performance of many future daughters sired by the bull, where these progeny are unselected and scattered throughout all different types of herd-environmental conditions. The level is based upon nationwide DHIA conditions as a whole. The primary purpose of the "Predicted Average" evaluation is to compare or rank AI bulls as to estimated breeding value. It is the most reliable method currently available for this purpose. It is applicable to individual dairymen in their choice of AI sires since a given number of bulls will rank similarly in breeding value both within and throughout a large number of herds.

## DISTRIBUTION OF PREDICTED AVERAGE

In the Appendix are given tables indicating the variability in the Predicted Average for milk and fat for AI sires. Table 1 for each breed presents stratifications of the Predicted Average of milk production for the AI sires. The second table for each breed gives a similar breakdown on Predicted Average for fat production.

These tables provide a means of rating any particular AI sire with respect to all AI sires of that breed summarized at the same time. For example, suppose that a particular Holstein AI sire had a Predicted Average rating of 13,500. In the Appendix table for Holsteins (milk production) we find that of the 644 Holstein AI sires summarized, 97 percent had a Predicted Average for milk production which was less than that of the sire we are considering (13,500). This means that, if we choose a Holstein AI sire with no regard to production, we have one chance in thirty-three of picking a sire genetically equal to or better than this bull.

## DHIA 305-2X-ME BREED AVERAGES (1958-62)

| Breed             | Milk   | Fat |
|-------------------|--------|-----|
| Ayrshire          | 9,732  | 395 |
| Guernsey          | 8,609  | 411 |
| Holstein          | 12,471 | 455 |
| Jersey            | 8,066  | 416 |
| Brown Swiss       | 10,922 | 447 |
| Milking Shorthorn | 8,607  | 330 |
| Red Dane          | 9,512  | 380 |
| Red Poll          | 7,642  | 312 |
| Other             | 9,744  | 417 |

## ARTIFICIAL-INSEMINATION ORGANIZATIONS IN THE UNITED STATES

OHIA SIRE SUMMARY RECORDS, OF SIRE IN AI SERVICE, INDICATE BY CODE NUMBER THE LAST AI ORGANIZATION OWNING THE SIRE. FOLLOWING IS A COMPLETE LIST OF AI ORGANIZATIONS THAT HAVE OPERATED IN THE UNITED STATES--ACCORDING TO REPORTS RECEIVED IN THE ANIMAL HUSBANDRY RESEARCH DIVISION. SOME NO LONGER EXIST, BUT SIRE IN SUCH ORGANIZATIONS MAY BE SUMMARIZED, IN WHICH CASE REFERENCE WILL BE MADE TO THE ORGANIZATION IN THE SIRE SUMMARY DATA.
